Hi Lily,

Thanks for reaching out! The project is licensed under the MIT license and you may use the project however you'd like.

I should warn you though; it is a pretty old project and it might not be easy to get it up and running. The Lichess API side has also changed in recent years and that part is also not functional.

Good luck!
Halil

For my senior project, I (along with 4 other people) are working on a react native app (I have supplied the github in this email). Part of our app is chess, and I was wondering if I could use your chess app as a template. The chess I am trying to build is couch co-op so slightly different than what you imagined. This is NOT for profit and purely for our senior project. I will also make sure to credit you in the code. I wanted to reach out and make sure that you are ok with the usage of your code.
